

HOW TO PREPARE FOR THE TINT INSTALL

How to Prepare Your Vehicle for a Smooth, Efficient Install:

To ensure a flawless tint job and a timely turnaround, please review and follow the steps below before your scheduled appointment.

Timing Your Drop-Off:

Be on time. Vehicles must be dropped off at the scheduled time to keep your project on track. Our install schedule runs tight—late drop-offs may result in rescheduling, or delayed pickup times.

Early is better. You're welcome to drop off the vehicle early, especially if you'd like to avoid potential delays or conflicts. Need to cancel or reschedule? Please give us at least 24 hours' notice.

Cleanliness Is Key:

Interior: Please make sure the interior is clean, especially around the windows. Remove Child seats (if possible) loose items on or near the dashboard, seats, and rear deck. Any window-mounted accessories (e.g., suction cup GPS units, phone holders). If there is significant debris we cannot ensure a clean install. However, we will do our best to prep the windows accordingly.

Exterior Windows: A quick rinse of the glass helps, but no wax or glass treatments prior to your appointment—they can cause adhesion issues.

Cold Weather Notice (if applicable): If temperatures are below freezing, allow a little extra time for drying.

Additional Notes:

Electronics: If your vehicle has aftermarket electronics or window regulators that act up, let us know ahead of time.

Existing Tint: Please notify us if your vehicle has existing film that needs removal—it requires extra time and will affect pricing. We do prefer that we remove the previous tint to ensure proper removal.

Pets: No pets in the vehicle during drop-off or pick-up.

Special Requests: If you have specific shade requests or concerns, bring them up before install day so we can prepare accordingly.

Post-Install Guidelines

Do not roll down windows for at least 3–5 days after installation. A slight haze or moisture bubbles under the film are normal during the curing process (typically clears in 3–7 days depending on weather). Avoid cleaning windows for the first week. Afterward, use ammonia-free glass cleaner only.

Disclaimer:

For the best installation results, we remove certain panels as part of the process. In some cases—especially with older vehicles—this can lead to clips or trim pieces breaking. We do our best to replace any broken parts within reason and appreciate your understanding.

If you have any questions, feel free to reach out before your appointment.
